

Product Description

PRP BioCONTROL is the biological based odour treatment to use for any of your heavy duty restoration deodorizing needs. PRP BioCONTROL has a highly concentrated amount of spore strains that are designed specifically for the restoration industries' toughest challenges such as post-mortems and trauma, protein fires, skunk and urine spills.

PRP BioCONTROL digests organic odours and moderate soil loads into water and carbon dioxide. In situations where heavy soil loads are present such as trauma and most multiple pet dwellings, you should use PRP BioFIRST to digest the soil load and use PRP BioCONTROL for the odour only.

PRP BioCONTROL contains no fragrance or deodorizers, which could trigger hypersensitivities in homeowners or pets.

PRP BioCONTROL begins the digestion process in areas of sustained moisture. This product must have wet contact with all odorous surfaces long enough to penetrate and digest the odour to be effective. Wet contact time will vary with porosity of the surface and the nature of the odor.

DIRECTIONS

Apply PRP BioCONTROL with a wet ULV fog (no thermal fog) or a sprayer application to accomplish the above. An electromagnetic sprayer or 'magnet sprayer' can be an effective tool for application especially after protein fires.

Dilution Ratios:

For heavy duty applications: dilute product 3 parts water to 1 part PRP BioCONTROL (1:3).

For medium duty applications: dilute product 10 parts water to 1 part PRP BioCONTROL (1:10).

If the surfaces are already wet, then increase your concentration of PRP BioCONTROL accordingly. Keep the surface moist with diluted product as required, or until odour is no longer present.
