

DESCRIPTION

Max 8 is a chlorinated powder containing 8% available chlorine by weight. **Max 8** is used for a variety of applications such as the sanitizing of processing equipment, general disinfecting, disinfecting drinking water, treating newly drilled wells, mold removal and swimming pool chlorination. It can be safely added to alkaline cleaning solutions to help remove soils in processing equipment.

SPECIAL INFORMATION

It is very important not to contaminate **Max 8** with iron. A very small amount of iron will turn the bleach to a dirty looking brown color. Do not use metal pumps with bleach.

Never add **Max 8** directly to cleaning compounds. Always put the alkaline compounds into solution first, then add the required bleach. Never add bleach to acids of any kind or to ammonia (a toxic chlorine gas will result).

Max 8 is a Canadian Food Inspection Agency (CFIA) approved product for use in registered food processing plants.

DIRECTIONS

For General Disinfection of Hard Surfaces:

Dilute 10 grams (2 "heaping" teaspoons) of **Max 8** in 4 L of cold water with stirring. This dilution produces a 200 ppm active chlorine solution.

Please consult your Maxim representative for specific recommendations to meet your particular needs.
